Tar Sands Strip Mining in Utah:

What's at stake? What are the risks? What are the alternatives?

Join us for a public presentation by

John Weisheit

*Conservation Director of Living Rivers
and the Colorado Riverkeeper*

Saturday September 24th @ 2:00 PM

Salt Lake City Downtown Public Library

400 South 200 East SLC

Basement conference rooms A and B

- **Tar sands are the dirtiest, most expensive, lowest yield, bottom-of-the-barrel petroleum resource there is. They signify a civilization hitting “rock bottom” of an addiction.**
- **Testing has already started in eastern Utah for what could be the first tar sands petroleum development in the United States.**
- **A similar project in Alberta Canada has already destroyed a priceless ecosystem the size of Florida, resulting in the largest environmental catastrophe in the world.**
- **Impact studies have indicated that tar sands development places local communities at profound social, economic, and public health risk.**
- **There are alternatives for supplying energy, local jobs and economic development.**

Event hosted by Utah Tar Sands Resistance at the Annual Imagine Peacefest Event
